

Odiljonova Gulnoza Mirzoxidjon qizi*3 year student TSPU named after Nizami**Scientific supervisors: Zamira Rustamovna*

Abstract: *This article is dedicated to the deceased teacher, one of the people who lives forever in the heart of the nation with his hard work, scientific potential, and whose life path serves as a school of example for young people.*

Keywords: *Professor, foreign language teaching methodology, educational work, scientific research, knowledgeable teacher.*

Teacher is a figure who has been living since the beginning of the concept of life. That's why trust and respect for mentors has been special since time immemorial. When a teacher is mentioned, the feelings of deep respect and infinite gratitude arise in the heart of every person, and at the same time, a sense of indebtedness that cannot be measured and fulfilled by any wealth. First of all, a person always lives with a feeling of gratitude towards his teachers and mentors, who opened the way to the world of knowledge and enlightenment, and who worked hard to instill in his heart the feeling of high human qualities. We have seen enlightened, humble people who became an example to others with their good qualities. There are people whose acquaintances remember them only with feelings of love, respect, admiration and gratitude. A passionate teacher, skilled pedagogue and humble scientist Jamol Jalolov, who devoted his life to science and education of young people, was one of such enlightened people.

Jamol Jalolov was born on February 10, 1937 in the city of Kokan, Fergana region. In 1953, he entered the Tashkent State Pedagogical Institute of Foreign Languages (now Uzbekistan State University of World Languages), and in 1957 he graduated with honors in English. In 1972, he defended his candidate's thesis on the methodology of foreign language (English) teaching in Moscow (Academy of Pedagogical Sciences). In 1991, he was awarded the scientific title of professor. Jamol Jalolov has been working in the higher education system since 1957. English teacher at the Leninabad State Pedagogical Institute (1957-1958), researcher, department head, scientific secretary at the Research Institute of Pedagogical Sciences of Uzbekistan (1961-1975), head of the department at the Tashkent State Pedagogical Institute of Foreign Languages (1975-1986), named after Nizami. He works as a department head at TSPU (from 1986 until now). In 1958-1960, he served as a military translator in Vladivostok. It should be noted that the works of Jamol Jalolov are known and appreciated not only in Uzbekistan, but also abroad-in the USA, Germany, the Russian Federation and other regions. These works were published in Uzbek, Russian, English, and German languages. For example, books and articles published by Jamol Jalolov in various European universities have attracted the attention of experts. Jamol Jalolov gave lectures at a number of scientific-practical, scientific-methodological and theoretical conferences. In particular, his lectures at Freiburg University in Germany in 2006/2007/2008 made a great impression on professors and students of this university. In addition, Jamol Jalolov gave

lectures in English and Russian during his scientific trips to the USA and the CIS countries. Due to his extensive activities, Professor Jamol Jalolov became known and respected not only in our country, but also outside its borders. Under the leadership of a passionate teacher, professor Jamol Jalolovich Jalolov, the faculty staff has implemented a wide range of works in a short period of time. The history of the department, the professors and teachers who worked in it, the conducted scientific research, spiritual and educational work, the cooperative activities of the departments in the republican and international spheres, the services of the faculty in training pedagogues in our country and improving the teaching of foreign languages, created scientific A wealth of material on works and text books has been collected and systematized Teacher has written several books, the main of English language teaching methodology Foreign language teaching methodology and several other books These books are still used by pedagogues. The book is written on the basis of very meaningful and understandable rules. These books were used by educators as good development and material.

The teacher was distinguished by his honesty, hard work, unceasing research in the field of science, benevolence and kindness towards young people, and his wonderful qualities of a scientist and a person, such as trying to apply them at every step. During the conversation, the teacher will talk about the attention given to science in the past, the difficult days, the experiences he had during the Great Patriotic War, the current problems of civil sciences and the prospects for solving them. He would explain all the aspects without hesitation. On holidays and birthdays, his friends, students, relatives, and colleagues listened to the teacher's memories with interest, and his jokes created a cheerful mood. Jamal Jalolov introduced his students to the scientific community, joined their ranks, created harmony among them, became an active participant in the development of science, and at the same time, he is one of the mature scholars who created his own national knowledge in our country. The scientific teachings and advanced ideas created by the kind teacher are continued today by many of his students. This great person will always live in our hearts. The memory of a person who took a place in our hearts with his good deeds will remain forever. Because the memory of a dear person is even dearer.

Jamol Jalolov started talking about his life experiences in an interview with journalists on May 19, 2018. He spoke about his achievements from his youth to this day. According to Jamol Jalolov, he received a good education at the university from the 1st year, and after completing the 4th year, he participated as a translator in large international conferences. And he participated in several similar foreign events at film festivals. Through these things, his interest in foreign languages increased even more. He also said: "I did not limit myself to learning the language, I did scientific work on the methodology of teaching foreign languages," says Jamol Jalolov. A tourist who has gone on a long trip will stop and rest for a while at a specific destination. Looks back and summarizes the distances covered. The arrival of a person in this bright world is not just a product of chance. Each of us was born to perform some task and it is our duty to fulfill it. Another fact is that we are inextricably linked to each other during our life and work. Life teaches us the lesson of understanding the invisible bonds of protecting each other, protecting each other, and spending our pure intentions on the path of good deeds. Jamol Jalolov was a kind teacher of famous scientists and students. Everyone

enjoyed the ocean of knowledge, a product of his deep thinking. Our hero, Jamol Jalolov, is a devotee of science. He is a person who has achieved success by holding his skirt tight. The modest life and effective work of a scientist is worth showing as an example to many people. Lives earned by hard work serve as a school for others. Jamol Jalolov's father, who was honored with the name of Jalaluddin Khoji, was an intelligent person who understood religious and worldly sciences, although he did not have a higher education. Intellectuals of the time, scientists, famous writers and khafiz did not leave their family. This was one of the important factors in Jamol Jalolov's coming of age. Because the environment has a special role in child education. Today, our linguists are doing a lot of good work. Special textbooks are being created and methodological manuals are being put into practice. In this regard, the services of professor Jamol Jalolov, the author of a number of textbooks and methodical manuals, are incomparable. At first glance, the method of learning foreign languages quickly and effectively with simple instructions actually requires a great scientific potential from the teacher and the ability to approach each student individually. It is easy to start a conversation with Jamol Jalolov, he listened attentively to his interlocutor, avoided scientific terms and explained his thoughts in a simple and fluent way. In our opinion, he was the same in the audience. There is no difference between Jamol Jalolov's virtuous love for his father and mother and his sense of responsibility towards the Motherland. Jamol Jalolov himself was also the father of 6 children and the grandfather of many grandchildren. Our hero Jamol Jalolov passed the product of his scientific experiments, which he gained as a result of many years of hard work, into the property of science opened a new page as a separate methodical school of language learning.

When talking about teachers, I always remember the story of Alexander the Great. He was the first to transfer his mentor to the throne of the country he conquered. One day he asked her: "Why do you do that?" When asked, he said: "My parents were the reason for my birth, and my teacher was the reason for my rise." There is a total human being on earth, in his maturity, in his formation as a person and in finding his place in society, the work of you dear ones, your place is incomparable. Hard-working, selfless teachers and teachers not only impart knowledge to their students, but also inculcate in them good human qualities. He wants his student to grow up with qualities such as kindness, loyalty, hard work, gives various advices and shows the right way. Just like our parents, he rejoices at our small achievements, notices the invisible talent and ability in us, and tries to develop it. In general, the success of young people who are achieving success in various directions in life and achieving high goals is naturally the result of the tireless work of teachers. After all, the fruits of education and hard work given over the years will yield such fruits over time. When we say memory, we all understand the sacred feeling that is embedded in our blood and bones. Indeed, commemorating those who have passed away, commemorating their souls has become a good tradition and good habit for our people for centuries. In our country, studying the past of our people, commemorating the spirit of our ancestors, preserving the tangible and intangible heritage that has reached us from them has been raised to the level of state policy. We can see a clear expression of the same reality on May 9, the Day of Remembrance and Appreciation, which is celebrated every year. Great preparations are being made in the public education system to celebrate this holiday in a cheerful spirit. Perpetuating the memory of those who

bravely died in the fight against fascism in the Second World War, ex-combatants who have reached old age today, military personnel and law enforcement officers who died in the line of duty during the years of independence, to the veterans showing respect, strengthening the atmosphere of kindness, solidarity, humanity, tolerance and generosity among students, the effect of this holiday is great.

Yes, the teacher is like a burning candle. It burns itself and spreads light around. Others will enjoy this light. For this reason, every person, regardless of age, position, and level, always bows before the teacher-coach who taught him. As Alisher Navoi said, no amount of wealth or treasure can measure the hard work of the teachers who taught us a thousand painful lessons in the path of truth. Their work is incomparable and unique. It is no exaggeration to say that it was a vivid expression of his respect for teachers. The head of our state gave a description to the teachers and coaches, "If the world's greatest buildings are schools, then the most honorable of professions is teaching and mentoring. Truly, a teacher brings grace and wisdom to the classroom, but goodness to thousands of souls. "He is an honorable person who gives his children the school of life. " The beauty of life, well-being, decency, moreover, the development of our independence is due to the work of the teacher. Abdulla Avloni, a famous pedagogue of his time, wrote that "the happiness of every nation, the peace and happiness of the states depends on the good education of the youth." The saying "Your teacher is as great as your father" has a universal meaning. We even compare the Father to the sun and praise him by raising him to the sky. But there is a person who is considered as great as a father, this is a teacher! In fact, parents bring you to adulthood, and teachers help you grow, mature, and reach the heights of knowledge. He spends his life, heart, intelligence, experience and knowledge on your way. He is happy to see your success, saddened by your failure. A teacher is like a gardener. How many generations will enjoy the harvest of the plants he nurtured. The responsible but honorable professions of teachers and coaches can be compared to a torch. When a teacher is mentioned, every person feels deep respect - respect and infinite gratitude, and at the same time, a sense of debt that cannot be measured and fulfilled by any wealth. If we follow the teachings of our teachers and the advice of our elders, we will never fall short. With this, we will fulfill our first duty to our teachers and coaches. First of all, a person always lives with a feeling of gratitude towards his teachers and mentors, who opened the way to the world of knowledge and enlightenment, and who worked hard to instill in his heart the feeling of high human qualities. Teachers have a great impact on society and the lives of students. They are also very important in the life of parents because parents expect a lot from teachers for their children.

Our teacher Jamol Jalolov was one of such hardworking and knowledgeable teachers. With his great works, he won the hearts of all students and teachers. The memory of the teacher is always in our mind. The most important thing is that human qualities such as remembering the past and appreciating the living are being firmly imprinted in the consciousness of our youth. Remembering the lessons of yesterday and the people who sacrificed their lives for the future of our nation teaches us to value today and tomorrow. Without memory, there is no Appreciation. These concepts became a unique moral value for the generation of the independence period. According to the words of our President, the great victory was provided by people of great courage, and we, the grateful generations, will

always honor these selfless compatriots, we bow with respect to their incomparable courage and memory. In fact, every word spoken by the teacher, the wise advice given by him accompanies us and illuminates our paths of life like the sun. There is probably no more meaningful life in human life than in giving to science. Because it is happiness to share the joy of thousands of hearts and bring benefits to the whole country. Such a highly respected man will always remain in our hearts. His noble qualities, his scientific works, and methodical manuals have become a national heritage for future young pedagogues. We are proud to have such a teacher.

Our teacher Jamol Jalolov died on December 28, 2022 at the age of 85.
We wish the souls of this deceased to rest in peace.
