**Annotation:** *This article discusses the activation of students' knowledge, skills and abilities, the formation of pedagogical potential of students, the introduction of modern pedagogical technologies in the educational process based on a competency-based approach, the use of information and communication technologies in teaching, preparation and implementation of state educational standards. written about raising the level of knowledge and potential of students through the development of pedagogical competence of the teacher.*

**Keywords and phrases:** *State educational standard, competency approach, innovative educational environment, pedagogical process, motivation, modernization, innovative approach.*

Resolution of the Cabinet of Ministers of the Republic of Uzbekistan dated April 6, 2017 No 187 "On approval of state educational standards for general secondary and secondary special, vocational education" and its Annex 1 published the "State educational standard for general secondary education." This State Education Standard has entered the education system under the name of the State Education Standard, which is based on a competency-based approach in terms of content.

The formation of an innovative learning environment in the educational process is important for the implementation of a competent approach in meeting the requirements of the state education standard. In order to form the pedagogical potential of students, the introduction of modern pedagogical technologies in the educational process based on a competency-based approach, the use of information and communication technologies in the classroom, the preparation and implementation of state educational standards at the level of developed countries. the use of different levels of educational technology is one of the current problems of today.

In order to create an innovative educational environment based on a competent approach, first of all, students are required to get acquainted with the latest scientific and technical innovations and regularly study the problems of their implementation in practice.

As a result of creating an innovative learning environment in the teaching process, firstly, the process of students' entry into the pedagogical process is accelerated, secondly, the student's pedagogical skills are formed, and thirdly, the student's enthusiasm for pedagogical professions increases.

However, the teacher's lack of a comprehensive approach to pedagogical activity, low professional motivation, lack of regular work on improving pedagogical skills, to some extent negatively affects the further development of the education system, the organization of the

educational process as a template, as well as the formation of an innovative learning environment.

In order to create an innovative educational environment, it is necessary to regularly monitor the level of qualifications of teachers in educational institutions. To do this, it is necessary to further develop the process of monitoring and analyzing regular open lessons, open lectures and mutual lessons. It is important to take into account the specifics of each subject, the level of professional and pedagogical training of teachers, pedagogical competence, as well as the observation of lessons conducted by teachers and a comprehensive, ie pedagogical, psychological and methodological analysis.

In order to comprehensively introduce the above-mentioned requirements of the innovative educational environment into the educational process, it is necessary to develop the pedagogical competence of the teacher. This requires the appropriate and effective use of students' competencies in the basics and disciplines, a comprehensive approach to the process of formation of pedagogical competencies.

As a result of the teacher's integrated approach to the teaching process, professional skills, qualifications and potential, as well as improving the quality and effectiveness of teaching, as well as raising the level of knowledge of students to higher levels. To do this, teachers need to innovate in the process of using modern pedagogical and information and communication technologies, accelerate the process of modernization and increase the level of knowledge and potential of students through the development of pedagogical competence.

The main factors for further development of pedagogical competence and creation of an innovative educational environment are the formation of teachers' qualification requirements in all specialties on the basis of a competency approach, preparation of teaching materials on subjects, organization of professional development courses based on teacher needs and professional diagnostic analysis of teachers' pedagogical training. It is necessary to establish and develop measures to eliminate the identified gaps in students. Because the teacher's knowledge of modern knowledge, scientific innovations, the development of pedagogical competence (ability) is the basis for the upbringing of a modern harmoniously developed young generation.

Therefore, in addition to meeting the requirements of the innovative educational environment in the educational process, periodically modernize the interpretation of topics on the basis of innovative approaches, create electronic manuals in all disciplines of educational institutions, prepare presentations on topics, qualitative organization of pedagogical practice, diagnostic analysis of teachers' pedagogical training. If the development and implementation of the new edition is carried out, the innovative learning environment in the educational process will increase at the required level, and the level of knowledge of students will rise to a higher level, pedagogical skills will be gradually formed. The student's enthusiasm for the pedagogical profession also increases.
