**Abstract.** In linguistics, verbal or non-verbal communication means are being studied by many scientists in the broad way. Because they have some aspects that have not been observed. In this article we analyze means of expressing non-verbal communication in English language.

**Key words.** facial expressions, non-verbal, verbal, communication, Communication, verbal, non-verbal, paralinguistic influence

**Абстрактный.** В языкознании вербальные или невербальные средства общения широко изучаются многими учеными. Потому что у них есть некоторые аспекты, которые не наблюдались. В данной статье мы анализируем средства выражения невербальной коммуникации в английском языке.

**Ключевые слова.** мимика, невербальное, вербальное, общение, Коммуникация, вербальное, невербальное, паралингвистическое воздействие.

Language is a way to know the world of a particular society, transmit information and receive it characteristic that serves to satisfy the needs related to doing weapon is counted. The language is simple and at the same time extreme. It is difficult to perform these tasks on a regular basis through two types of complementary mechanisms: verbal and nonverbal communication is done. Verbal communication is the main information between individuals is a means of exchange and it is the information in the speaker's speech easily delivered to the listener opportunities to give and receive creates.

**Non-verbal communication** provides additional information about it to receive, express the given information quickly, conveniently, clearly and accurately serves. The central organ that produces speech is the listed language in addition, a smile on a person's face during non-verbal communication, gestures, tone of voice, body parts, hand movements and other techniques through communication, the intended goal is fully achieved. It is worth noting that verbal communication is about thoughts and feelings show since it is the most convenient tool to do, the participants in the interview process refraining from non-verbal communication as much as possible stands **interlocutors communicate** the information that is being communicated verbally creates a basis for clear and clear understanding and exchange of ideas. It is with the help of words that a person experiences and happens in the environment will

be able to fully express the ongoing processes and in addition from the components of non-verbal communication in providing information, when appropriate, skillfully used. Because feedback is gesture and body expression with the help of actions is the most complex process for communication is considered in linguistics, this direction is called paralinguistics depends.

**Nonverbal (paralinguistic) tools** differ from each other in languages according to the purpose of communication differs and acquires national and universal importance. Under study tools and components of non-verbal communication in languages expressed in communication individually should be researched. Because people of different nationalities are fluently verbal in a language known to them can communicate through the method, but they are non-verbal communication it is natural to encounter unique differences. And these people and nations are coming closer to each other, trying to understand each other complexity and mutual misunderstandings between them today can cause.

Researchers on the content and situation of communication according to different non-verbal means to be expressed and from each other they did not take into account the difference in meaning. Especially today of the hearing impaired, which is considered a part of direct non-verbal communication *dactylology alphabet* and the communication process of individuals of this category, as well as *braille for the blind, semaphore and morse code for the military alphabets and their specially coded notations* are scientists neglected and as an object of linguistics not accepted. This place has an ancient beginning people are originally a tribe that he began to communicate with his members using gestures and as a result of its evolution, first the origin of terms, and then the structure of sentences with the help of words it is necessary not to forget that it has come. The study of nonverbal means is great in all languages causing interest and controversy. The reason is today's globalization processes, people are not face-to-face in the virtual space, but at a distance communication is a priority profession to verbal means effective use of non-verbal means makes it easier. The development of transport and logistics systems is also international creating a huge need for a gesture system. Especially the development of tourism in the country, foreign tourists to communicate with the local population because they do not know the languages when entering, use gestures more than verbal means approval also exacerbates the problem. Nonverbally coming to the fore in relation to verbal means. The same non-verbal tools are confirmation and denial in dialogue meaning, in other words, positive and can also have negative connotations.

However, communication is non-verbal to the listener only if he uses (paralinguistic) tools correctly he manages to express the original purpose of his speech. It's too much or possible in the listener by using unnecessary non-verbal means misunderstanding should be avoided. Because, non-verbal means of communication are just as meaningful as verbal means (mono semantic) word or from (polysemantic) words with several meanings is organized. In addition, non-verbal

(paralinguistic) means of communication in accordance with the requirements of national or generally accepted norms, according to gender - gender paralinguistic tools (for example, for women constant smile, gentle tone, etc.) is important.

As a result, linguistics and social psychology the attention of a number of scientists in the fields of gender equality or superiority is in the center. Use of non-verbal means in communication according to gender status It also has an important place in Uzbek culture. Nonverbal expressing gender (paralinguistic) tools are mainly national culture, tradition and value related to Sometimes their true meaning is not only understood by foreign visitors, maybe even the representatives of our nation do not fully understand in some situations. Because actions expressed through many non-verbal means and it is an exaggeration to say that there are actions that are general and conditional in nature won't be. Gender non-verbal means of a general nature and all common to peoples (for example, flirting in women, subtle smiles, elegant taste, soft voice, sweet tone, etc.), and the conditional character is national or territorial gender paralinguistic means (for example, adolescent clapping hands and feet when greeting children).
