**Abstract:** This article discusses the methods and techniques for the formation of systemic education, theoretical approaches in the formation of the cognitive interest of students.

**Key words:** preschool education, communication, game path method, need, creative imagination, teaching methodology, basis of formation, realization of abilities, regularity.

### INTRODUCTION

Schools play a huge role in the formation of the personal core of students. They are not only responsible for the academic development of the child, but also have a significant impact on the formation of the child's personality. A good school helps students build self-confidence, appreciate individuality, improve communication skills, and hone other important qualities that will be useful to them in adulthood. How can schools ensure this?

Creating a favorable environment:

Children raised in compassionate and caring families grow up to be self-confident and productive individuals. And since schools are, in fact, the "second home" of most children, these educational institutions should also contribute to creating a good environment. When students are constantly encouraged to do their best for their own development, they are more likely to perform at their best and achieve their goals. This is the strength and importance of a supportive school environment. Administration, staff and teachers need to create and maintain a culture of encouragement in the school so that students can increase their self-esteem.

Teaching ethics and etiquette:

An effective school will pay attention not only to learning, but also to the development of the ethical and moral qualities of each student. They don't just raise kids with a drive to win and a champion mindset. They also strive to instill in them the honesty, kindness, tolerance, fairness, and patience that are necessary to become good adults.

Encouragement of self-discipline:

Discipline is one of the most important aspects of academic success as well as personal development. Schools should instill self-discipline in their students using age-appropriate strategies.

Extracurricular activities:

Each student has individual preferences and unique personalities. Someone loves sports, and someone is more interested in art. Some of them are inclined towards music, while others are fond of theatrical acting or public speaking. To cater to their diverse interests, the best schools hold a variety of extra-curricular activities that allow students to discover and hone their talents.

Education plays a very important role in all aspects of our lives. A person who understands the practical applicability of education is successful in life. As a student, just parsing texts and getting good grades doesn't matter. It is important to understand how this will make our lives beautiful for us and everyone around us. That is why an educated mind and a good heart come together to create revolutionary changes in society.

Education is the teaching of skills and knowledge. It helps us form opinions and have our own point of view on different things in life. The process by which a person acquires new skills, behaviors or understanding, often in a formal or informal setting, is called education. An individual personality is a set of qualities, characteristics, attitudes, quirks, psychological traits, beliefs and motives of a person that make up his personality. Personality means more than just your worldview. Personal development means the improvement of all spheres of human life.

“Personality is the sum and organization of those traits that determine the role of the individual in the group.” The role that education plays in shaping our personality is unparalleled. To be educated means to elevate our personality. Personal development is just as important as education. An elevated personality pushes us to move forward and stand out in the crowd. But in order to have a good personality, education is very important. Through education, a person learns how we should behave towards others. The behavior of people causes respect for them in society. Wrong behavior can spoil the personality of any person. In the educational system, people learn a code of conduct on how to behave with others. An educated person knows how to operate in different places. Education teaches us what words we should use when talking to others. An educated person knows that we should never use any kind of offensive language with others. Education teaches us how we can control our emotions. In our society, we must communicate properly and behave properly.

The time you walk with the community is the actual practice of your code of conduct. Positivity allows a person to successfully cope with difficulties. Education teaches to be positive. Those people who have a positive attitude can easily remove obstacles in their path. Through education, a person can develop a positive attitude towards things and people.

Education teaches us that everything that exists in this world has both negative and positive aspects. Thus, we should not only think about the negative in someone, we should also observe and think about the positive aspects of things, people or situations. Then we can understand things correctly. A person who is able to correct other people's mistakes is considered a good personality.

Through education, a person can become aware of his personal and political rights. He tells us how to get our rights and also how to respect the rights of others. Education teaches us that in our society everyone is equal. It also tells us about our responsibilities. He teaches us to be a good citizen, to treat everyone equally, to vote and acquire human rights.

Education expands our knowledge by providing us with useful information; "Old information" and "new information". It gives us general information on various subjects such as history, geography, civics, natural sciences, etc. and we get a clear idea of things. It informs us about new information in various fields such as technology, new inventions, etc.

Education also helps us increase our self-confidence in a variety of ways such as communicating, making decisions, overcoming challenges, getting feedback, and boosting self-confidence.

Education gives us many opportunities and many experiences. When we have different opportunities, we show our individuality and make it even better. Opportunity and experience are both words intertwined. Opportunities bring us many new things with new experiences. We get this experience only when we properly use the opportunities provided by education.

Along with all sorts of real knowledge and bookish knowledge, teachers instill in their students moral values, and from these moral values they learn useful habits and try to instill them. Healthy habits such as how timely we can get our work done, keep the environment clean and tidy, perform work in a disciplined manner, etc. Thus, through these healthy habits, education helps us in our personal development. The school plays a dynamic role in developing social skills that help students learn to interact comfortably with teachers, peers and parents. In addition, schools also teach students healthy relationship skills and help them develop through continued interaction.

If you think about the four main goals of the school: academic (intellectual), political and civic goals, socialization and economic goals. The school plays a more important role than the family in shaping the personality. School is a place where a person spends a significant part of his life. He accompanies people from childhood to adulthood. Therefore, it greatly influences the development of personality.

The school provides a structured education and contributes to the mental and psychological development of the child. In addition to academic learning, the child will also learn other important life skills such as teamwork, good manners, unity, sharing and responsibility. ... From the moment a child is born, learning begins.

School life is a very important part of a person's life, because it provides an opportunity to learn and discipline. ... The school gives students the opportunity to be disciplined. They show discipline in the classroom, on the playground, in the dorms and the library in other places. School is a meeting place for students and teachers.

Education teaches ethics, which helps to walk the right path and accept the right things. Then we do everything right just to succeed. Thus, ethics always improves our personality in a positive way. During the early childhood years, the child's mind is vulnerable and easily influenced. Children at this age look to others for guidance and self-affirmation. The role of an educator is to help develop the personalities of their students. As educators, we all know that our students seek our approval early in life. They look up to us and take our opinion as the truth. The expectations we project on our students affect their self-esteem and self-confidence. Many educators start their careers as teachers because of their passion to influence the lives of young people. Unique and outstanding teachers contribute to their professional development and performance by continuing their education and seeking knowledge on how to truly inspire a child. An educator who is committed to working with children to make an unforgettable impression can earn a master's degree in early childhood education. The early years of education can ultimately determine the personality development of these young children.
