**Keywords:** *Orientation to military professions, Homeland Defense, Department of Defense Affairs, practical advice, combat techniques, strong traditions, Academy of the armed forces, aviation knowledge institution, special faculty, state exams.*

### INTRODUCTION

The main tasks of the work of orientation to military professions are as follows::

To enlighten young people about the social essence and heroic service of the profession of an officer and, on the basis of this, to form a desire to devote their lives to the officers of the Armed Forces of Uzbekistan for the profession of pride and protection of the motherland;

to provide assistance to adolescents who decide to enter the lands of military knowledge, when choosing military specialties, taking into account their abilities and aspirations;

to explain the requirements for the moral and political, spiritual qualities of candidates entering the lands of military knowledge, physical and general educational training and develop in them the desire to transfer to the lands of military knowledge;

the initial stage of the work of orientation to military professions is considered to be the provision of information about professions.

Its implementation begins 2-3 years before the active transfer to the lands of military knowledge. At this stage, pupils become acquainted with the requirements for the composition of officers, understand the social significance of the officer's profession and the peculiarities of the military service of officers.

In the process of these works, the following forms of informing young people about military professions are used:

they meet with representatives of military units and military educational institutions;

Will meet veterans of the Patriotic War and the Armed Forces of Uzbekistan;

equipment of special exhibition tools that promote the profession of an officer in enterprises, organizations and educational institutions;

to conduct individual conversations with adolescents who fully meet the requirements for the career of an officer and want to submit to military educational institutions with the participation of military unit officers, representatives of defense work departments, about the career of an officer, about the procedures for submitting to military educational institutions.

In all adolescents, the formation of an interest in military service, a correct idea of military professions will largely depend on the leaders of the initial pre-conscription training of educational institutions. Students receive preliminary knowledge about the Armed Forces of Uzbekistan in preliminary preparatory training before the call, about the types of troops, their role in the defense of the country, features of service in the ranks of the Army, combat equipment and weapons.

The basis of information about military professions is the military-patriotic education of young people. In the process of this upbringing, thematic evenings on various military-patriotic topics, theoretical conferences, organizing trips to places of combat and labor fame and other similar events are held.

For the purpose of military-patriotic education of young people, Military-Sports Camps are created. In adolescents, the formation of a correct idea of the career of an officer and interest in military service should be carried out together with their parents and loved ones.

The next step in informing young people about military professions is practical advice, during which adolescents are directly assisted in choosing future life paths, taking into account their interests and abilities.

In the process of practical advice for a year before submitting to military educational institutions, along with a deep study of the interests, aspirations and abilities of adolescents who decided to submit to this or that military educational institution, at the same time, work is also carried out on the formation of the qualities necessary for the officer of Uzbekistan in them.

Practical advice is carried out during the period of study and work. Preliminary practical advice for adolescents is carried out by the heads of preliminary preparation until the call in educational institutions. They give an initial assessment of the personal qualities of adolescents, the level of moral-mental readiness to study in military educational institutions.

The next stages of practical advice are carried out by representatives of military educational institutions, officers of the Departments of Defense Affairs. These are widely involved veterans of the Armed Forces, representatives of the organization "Patriot".

One of the main forms of work aimed at military professions is individual work with adolescents who have a desire to study in military educational institutions, which is especially widely used during practical consultations. During these works, the level of socio-political and moral qualities, mental state, health, physical and general education training of adolescents is determined.

The end of the work of orientation to military professions is the issuance of trips to military knowledge lands, which are determined to be desirable for adolescents to submit. This referral must be reflected in the documents being formalized in order to be submitted to a military educational institution.

It is necessary to organize the work of directing to military professions and to monitor the conduct of these works, be under the responsibility of local authorities, departments of Defense Affairs, the organization "Patriot" and other responsible persons and organizations.

The success, effectiveness of these works will largely depend on the activities that all organizations carry out in harmony with each other, on their organizational abilities.

The work of directing young people to military professions is a task of State importance, the diligent implementation of work on this subject should become a practical duty of all responsible persons.
