Abstract: *All around the world, studying abroad can be considered as every student's beautiful dream, even one of their main goal, due to limitness opportunities that it creates. The research is aimed at writing some unusual facts about how to study in other countries with comfortable atmosphere, as it were, getting scholarship from foreign and famous universities.*

For many years, there have been investigations on gathering knowledge in other countries, student mobility and international student exchange. We can find some specific academic magazines, journals and books by international research institutions aiming to provide students with more exact details on this subject.

While conducting this research, the additional data was founded out about advantages and disadvantages of studying in foreign nation.

Although studying abroad involves plenty of money, students can win scholarships offered by international universities. However, there are some demands required from you for giving these scholarships.

Key words: *Studying abroad, limitness opportunities, international research institutions, scholarship.*

Introduction

In this modern and technical century, for every people, gathering more knowledge and study, work experience is required for leading a life of luxury. The best way to accomplish this mission is studying abroad and learning new, different educational technics as well as good job experience in there.

Obviously, this process can be laborious task, adult learners are challenged best through reflections, active learning and placing themselves in uncomfortable situations. Clearly, study abroad experience takes students out of their safe, comfort zones and brings them into contact with tough situations and cultural engagements, which are beyond their typical life experiences. Admittely, studying in other nation often demands money that can be higher for some students to pay.

Even though there are such kind of difficulties, there are also good points of this view. They can learn with high amount of scholarship provided from most international universities. One of the most interesting advantages of studying abroad is the exposure to a

new system of learning,because youth are often open to new adventures or such kind of situations,so being in such circumstances may make them feel good.Consequently, students are trying to take advantage of the opportunities given and do their best to reach their ambitions.Thus,according to some researches,over the past decade,the number of students studying abroad has more than doubled.For instance,in the 2006-2007 academic years, 241,791 U.S. students studied abroad,an increase of 8% from the previous year(Institute for International Education,2008).

Discussion

In every year-in every fall and spring,most of educational institutions offer grants with different amount for international young people wanting to study that university.Since numerous students have interest in American universities, Harvard University is selected firstly. It offers scholarships for postdoctoral research studies.Only Doctor's Degree students can apply for this grand.Postdoctoral Academy scholars will receive an annual stipend of 75 000\$.Each year four to six Academy scholars are named for two-year appointments(within two years of the August 1, 2023, start date).

Futhermore,Berkeley University of California provides grants.To be eligible for the VC Berkeley scholarships for students from another countries must maintain a GPA of a minimum of 3,7 during the full course,they also have certificates proof their English proficiency(TOEFL iBT of 90,TOEFL PBT of 570,or IELTS band 7).As international student,you can expect high quality courses in Aerospace Engineering,Armenian studies,and Atmosphere Science as well as other programs for bachelors.For Master's, you will have excellent education in courses, such as Bioprocess Engineering,Chemical and Biomolecular Engineering,and Earth and Planetary Science.

Additionally,Cambridge University award 500 scholarships annually,and supports between 1100 and 1400 students in residence each year.The deadline for Camvridge-Trust scholarships is usually the first week in December.When it comes to level or fiels of study, PhD,MSc, MLitt or a one year postgraduate course in any subject is offered at this university.

While being talked about studying in another country,the question of which university can be the best one to study and whether it is located in a good place,whether it can create good atmosphere to gain knowledge for every students should be discussed.The most essential one is education system and education atmosphere.There are stark differences between the eastern and western eucational approach.Consequently,each of the distinct characteristics of Eastern and Western education are vital in shaping personalities and outlooks of students.

Almost all students give their preference for studying in western universities because of their quality education,in the educational environment of Western countries,a democratic style of teacher-student is encouraged. It emphasizes on active learning that involves students' active participation in class and group, the main goal is that students can easily enter into discussions and debates with the teacher,thus gaining new knowledge without any difficulties in the process of such communication.Students see their role as contributors,not just recepients of whatever is spewed out by the instructor in the classroom.So western universities can play an essential role in producing successful professionals.

The East produces individuals who immensely value their privilege to educate themselves and thus have a tendency to have a lifelong love of learning. In addition, Eastern systems often instill moral value in education. For example, in China in particular, students follow the learning tradition founded by Confucius, who emphasized the vital role of education in bringing honor to one's self, family and society. In eastern educational institutions, there is one belief that discipline can outweigh any academic difficulty, discrediting any other factors that may affect student performance. Furthermore, in East, there is a strict rule that students' failure in academics then fall mainly on their shoulders, or are credited to their parents.

Conclusion

All in all, studying abroad is a great opportunity for students to open their mind to new perspectives and ways of living, learn foreign languages, and study in locations that complement your classroom learning or specific field of study. Students will also make lifelong friendships, expand their global network, and gain transferrable skills, which can set them up for success as they enter the workforce.
