**Abstract:** *Creative thinking is an essential skill that plays a crucial role in the cognitive development of elementary school students. In today's digital age, multimedia technologies have become valuable tools for enhancing creativity in students. This article explores the methodology of using multimedia technologies to foster creative thinking in elementary school students. By incorporating various multimedia elements such as videos, interactive activities, and online resources, teachers can create engaging learning experiences that stimulate creativity and innovation in young learners.*

**Keywords:** *creative thinking, elementary school students, multimedia technologies, methodology*

**Introduction:**

The ability to think creatively is vital for success in the modern world. Creative thinking enables individuals to come up with innovative solutions to problems, think outside the box, and express themselves in unique ways. In elementary schools, it is crucial to nurture and develop creative thinking skills early on to prepare students for the challenges they will face in their academic and professional lives. One effective way to promote creative thinking in elementary school students is through the use of multimedia technologies. In today's rapidly evolving world, the ability to think creatively is becoming increasingly important. Creative thinking allows individuals to come up with innovative solutions, think outside the box, and adapt to new challenges. This skill is especially crucial for elementary school students as they are in a critical stage of cognitive development. One effective way to foster creative thinking in young learners is through the use of multimedia technologies.

**Methodology of Formation of Creative Thinking:**

The methodology of using multimedia technologies to enhance creative thinking in elementary school students involves a combination of different approaches and strategies. Firstly, teachers can incorporate multimedia elements such as videos, animations, and audio clips into their lessons to make learning more engaging and interactive. These visual and auditory stimuli can help stimulate students' imagination and inspire them to think creatively.

Additionally, teachers can encourage collaborative activities that involve the use of multimedia tools such as online platforms or software programs that allow students to work together on projects or presentations. By working collaboratively, students can bounce ideas off each other, learn from one another's perspectives, and come up with innovative solutions collectively. Furthermore, teachers can provide opportunities for self-expression through creative projects that involve the use of multimedia tools like digital storytelling or video editing software. Allowing students to explore their creativity through these mediums can help them develop their unique voice and express themselves creatively.

The methodology of formation of creative thinking in elementary school students by means of multimedia technologies involves a multifaceted approach that incorporates various interactive tools and platforms. Here are some key strategies that can be implemented:

**Interactive Learning Platforms:** Utilizing multimedia platforms such as educational apps, games, and videos can engage students in interactive learning experiences that stimulate their creativity. These platforms can present information in a visually appealing manner, incorporate audio elements, and provide opportunities for hands-on activities.

**Collaborative Projects:** Encouraging students to work together on collaborative projects using multimedia tools can help enhance their creative thinking skills. By collaborating with peers, students can brainstorm ideas, share perspectives, and develop innovative solutions to problems.

**Visual Storytelling:** Incorporating visual storytelling techniques such as digital storytelling or creating animated videos can encourage students to express their thoughts and ideas creatively. These activities can help students develop their communication skills and improve their ability to think critically about narrative structures.

**Virtual Field Trips:** Taking students on virtual field trips using multimedia technologies can expose them to new environments, cultures, and ideas. These experiences can inspire creativity by sparking curiosity and imagination in students.

**Project-Based Learning:** Implementing project-based learning activities that require students to research, plan, and create multimedia presentations can help develop their problem-solving skills and critical thinking abilities. By working on real-world projects, students can apply their creative thinking skills in practical contexts.

### **Conclusion:**

In conclusion, the methodology of using multimedia technologies to foster creative thinking in elementary school students is a valuable approach that can enhance learning outcomes and cognitive development. By incorporating multimedia elements into lessons, encouraging collaboration among students, and providing opportunities for self-expression through creative projects, teachers can effectively nurture creativity in young learners. As we continue to embrace technology in education, it is essential for educators to leverage multimedia tools to promote critical thinking skills that will benefit students throughout their academic journey and beyond. In conclusion, the methodology of formation of creative thinking in elementary school students through multimedia technologies offers a dynamic approach to fostering creativity in young learners. By incorporating interactive learning platforms, collaborative projects, visual storytelling techniques, virtual field trips, and project-based learning activities into the curriculum, educators can provide students with opportunities to develop their creative thinking skills in engaging and meaningful ways. Embracing these innovative methods can empower elementary school students to become more imaginative thinkers who are well-equipped to tackle future challenges with confidence and ingenuity.
